

About the Company :-

We are a leading company specializing in precision die casting, extrusion and Alloys. Our company is dedicated to fostering talent and providing opportunities for students interested in mechanical, mechatronics, automobile, production, metallurgy, electrical, tool, and die casting engineering fields.

Our company offers exciting career opportunities in various domains, including design, manufacturing, quality assurance and project management. We are particularly interested in students specializing in mechanical, mechatronics, automobile, production, metallurgy, electrical, tool, and die casting engineering disciplines. We are enclosing the JD for your reference.

Job Description:

(GET) Graduate Trainee Engineer

❖ **Job Title:** Graduate Engineer Trainee

❖ **Industry:** Precision Die Casting

❖ **Location:** Manesar or Jaipur

❖ **Duration:** 12 Months Training and 2 Years Bond

❖ **Departmental Exposure:** Materials, Production & Materials Planning, Engineering, New Product Development, Design.

Key Responsibilities:

1. Materials Department:

- Learn about the procurement, inventory management, and quality control of materials used in precision die casting.
- Assist in optimizing material usage and cost reduction initiatives.
- Collaborate with the Materials team to ensure timely availability of materials for production.

2. Production & Materials Planning:

- Gain insights into production planning, scheduling, and resource allocation.

- Assist in developing and implementing materials planning strategies.
 - Work closely with cross-functional teams to streamline production processes.
3. Engineering Department:
- Participate in the design and development of precision die casting components.
 - Contribute to process optimization, cost reduction, and quality enhancement projects.
 - Collaborate with the Engineering team to address technical challenges.
4. New Product Development:
- Contribute to the ideation and development of new products within the precision die casting domain.
 - Collaborate with cross-functional teams to bring innovative products to market.
 - Assist in prototyping and testing new product designs.
5. Design Department:
- Learn and apply design principles in the creation of precision die casting molds and components.
 - Assist in using CAD software for product design and development.
 - Collaborate with the Design team to ensure designs meet quality and performance standards.

Qualifications:

- Bachelor's degree in Mechanical Engineering, Electrical or Mechatronics,
- Strong academic background with a minimum of 60% throughout the education.
- Excellent problem-solving skills and a passion for precision manufacturing processes.
- Effective communication and teamwork abilities.
- Willingness to learn and adapt in a dynamic work environment.

Training Period:

The selected candidates will undergo an intensive 12 month training program, rotating through various departments to gain a comprehensive understanding of the precision die casting industry.

Deployment:

Upon successful completion of the training period, candidates will be deployed in one of the mentioned departments based on their performance during training and organizational requirements.

Bond Period:

Selected candidates will be required to sign a two-year bond with the organization.

Benefits:

- Comprehensive training and development opportunities to enhance technical skills and knowledge.
- Opportunity for career advancement and growth within the company based on performance and potential.
- Competitive salary and benefits package upon confirmation after the apprenticeship period.
- Exposure to cutting-edge technologies and industry-leading practices in precision die casting engineering.

NOTE :- All students must bring their 3 sets of updated resume and marksheets on the day of the campus drive.
